Genius Solutions in Technology

Corporate

About Us

As a technology company, we develop **R&D and software** projects in health information systems in order to ensure digital transformation and improve service

As Dahi Technology Group, we have developed numerous projects in health information systems since 2010 to provide innovation and technology-based solutions. We continuously update the projects we have developed and transform them into technological business models and maintain our services with the principle of 24/7 support to keep customer satisfaction at the optimum level. Offering comprehensive services within the framework of our ecosystem in the Republic of Türkiye and international health informatics, we provide services in e-health solutions, 3+ software development, and hardware-network. The projects we have developed in health informatics have the quality and experience to serve all types of health organizations.

The secret of success is continuity of aspiration. Perfection is not achieved by a single step, but by taking thousands of steps..

Our Vision

Our vision is to be a pioneer in the international health information systems sector with our genius ecosystem that goes from dream to idea, idea to plan, plan to practice.

Our Mission

Our mission is to ensure customer satisfaction by implementing our digital solutions most efficiently.

Our Values

- Reliability
- Quality Orientation
- Continuous
- Improvement

dahi

01

Our Strategy

To provide effective and high-quality services in health information systems in the Republic of Türkiye and internationally by creating a broad ecosystem with our local stakeholders.

02

Our Business

Our projects are developed as site-specific solutions in line with the organization's requirements.
Discovery > Analysis > R&D > Project Design > Product Development > Installation > Training > Support

03

Our Quality Approach

We carry out our R&D and project activities in accordance with TSE-HYB, ISO27001, ISO27701, ISO9001, ISO20000, ISO45001, and ISO15504-SPICE documents and standards.

- Cloud Services

Services

Not only do we develop technology, but we also produce various business models through the projects and products we design with an understanding of the needs of different industries.

Genius Solutions in Health

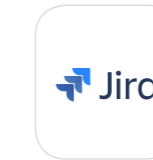

Project Management R&D and Software

We continue our R&D activities and develop software projects in Text-to-Speech, Speech-to-Text, RFID, Bluetooth, Video Streaming, Natural Language Processing, Artificial Intelligence, IoT, Mobile Apps, Automation, and Cloud Technologies

Project Management

We develop the product and business model using the most effective technology with our R&D works for the business idea that emerges through project management with our expert staff.

R&D and Software

We carry out business ideas according to the SWOT analysis by maintaining inter-departmental work by adhering to project management processes.

Information Technology Consultancy and System Support

By analyzing the IT and IT systems of health institutions, we determine the needs, position the appropriate systems, and provide support services.

Information Technology Consultancy

We provide consultancy services to develop specialized solutions by conducting exploration and analysis studies with our expert team to keep business continuity at the highest level in health facilities.

System Support Services

In System Support Services, we offer 24/7 support services for existing systems and products to operate more effectively and provide on-site support services with the human resources required for the positioning of new products.

Hardware and It Network Services

We provide system management by supplying and installing projects and products for at least 5 years to strengthen hardware, network, and IT infrastructure in healthcare organizations and to ensure smooth operation.

Server Systems

We provide the server infrastructure required for our institutions to continue their business, store their data securely, and manage their networks.

Storage Systems

For big data storage, access, and management of our institutions; We provide storage systems, high-capacity disk drives, as well as local backup, data security, and data access service

System Rooms

We carry out system cabinets, IT equipment, servers, and switch product studies for physical environments that are specially designed for our institutions and are equipped in a safe and orderly manner, along with project studies and product supply following the necessary fire and security measures.

Hardware and IT

The existing computer, operating system, anti-virus, domain, etc. in our institutions. We provide system management, device maintenance, and repair services, as well as the supply, installation, training, and operation of the products needed.

Maintenance and Support Services

We provide the information systems maintenance, repair, and support services your organization needs with our expert staff, on-site or remotely, on a 24/7 basis.

Among thousands
of ideas
one Genius!

"Our success comes
from being a good
team and respecting
everyone's opinion."

INTERACTIVE-DR

Audio Queuematic and Facility Management

dahi QUEUEMATIC

DAHI QUEUEMATIC

Audio Queuematic and Facility Management

It is a software system that enables the names or queue numbers of patients waiting in line at hospitals to be called by voice (loudspeaker, TV).

Application Areas

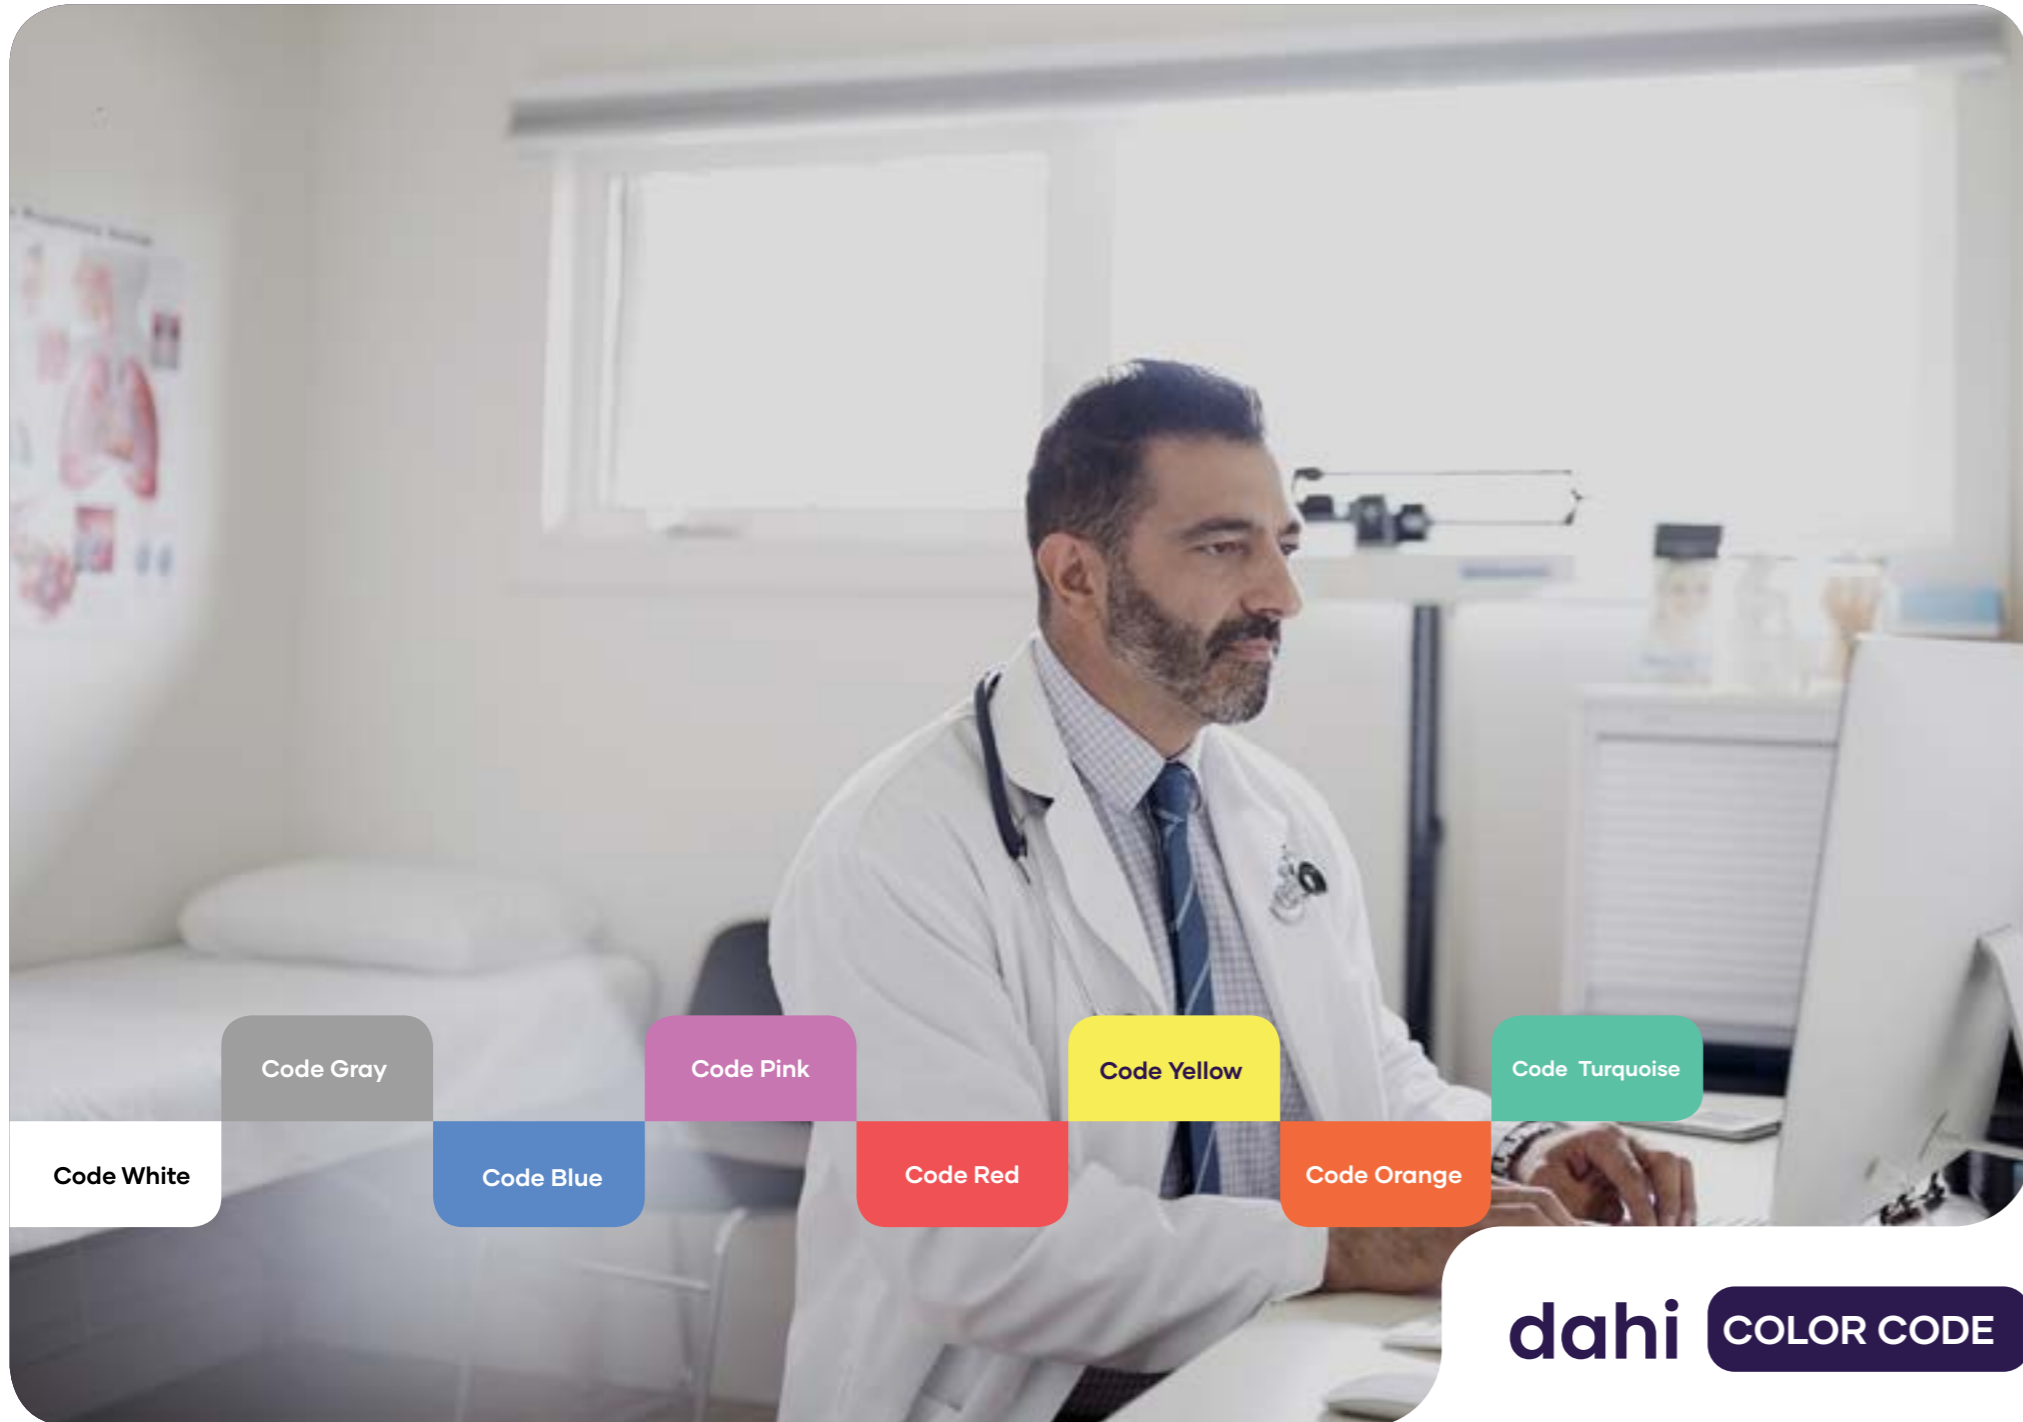

- Our Audio Queuematic and Facility Management product can be used in special projects such as Emergency Service, Blood Collection, Polyclinics, Radiology, and Health Boards
- Sağlık Tesislerinde;
 - Emergency Service
 - Blood Collection
 - Radiology
 - Polyclinics
- Desktop, Web, Android Queue | Android, IOS Application

Benefits

- It provides convenience to visually impaired citizens.
- It eliminates the need to constantly look at the screen.
- It provides convenience to illiterate or elderly citizens.
- It prevents crowds in corridors and doorways.
- It minimizes row fights and chaos.
- Thanks to the mobile application, it allows them to easily follow their queues.

Web
Site

Dahi Color Code

It is an automation system where you can manage fast and reliable emergency call processes in emergencies that require intervention.

Dahi Ecosystem

We bring together our extensive ecosystem and well-established stakeholders in health information systems and shape health informatics with years of experience.

E-Health Solutions | 3+ Softwares

E-Health Solutions

We develop province-wide or institution-based software, automation, and management system solutions for the management of health facilities.

HIMSS

It is one of the E-health solutions used in the health industry, and our company offers this service. HIMSS is a software solution that provides healthcare organizations with integrated healthcare management functions such as digitization of medical records, patient management, appointment tracking, monitoring of laboratory results, billing, and financial transactions.

Pharmaceutical Tracking System

It has significant functions, such as monitoring patients' medication use, tracking prescriptions, and providing warnings about drug interactions. Healthcare professionals and patients can manage their drug therapy more safely and effectively with this system.

Family Physician Information System

It is an information system that enables family physicians to digitally manage patients' medical records, appointments, prescriptions, and health histories. This system allows family physicians to monitor the health status of their patients and formulate treatment plans more effectively, thereby providing a better health service.

Laboratory Information Management

It is an information system that helps laboratories efficiently manage medical testing. This system improves laboratory operations by recording, tracking, reporting, and sharing test results.

Picture Archiving Communication Systems

It is an information system that enables the digital storage, management, and sharing of medical images. This system is used in radiology, diagnostic imaging, and medical imaging centers.

3+ Software

We develop digital solutions that facilitate provincial health information management systems, managing and monitoring health services, keeping records of patients, generating statistical

Supply Management System

It aims to manage medical supplies and pharmaceutical procurement processes for healthcare institutions by digitalizing and optimizing them. This system monitors stocks of medical supplies, manages orders, facilitates communication with suppliers, and improves

Disability Database System

The disability database system is a digital database created to facilitate the lives of people with disabilities and support them in participating more effectively in society. The Disability Database System provides easy access to information on accessibility, legal rights, sources of assistance, and special needs for people with disabilities.

In-house Navigation

We have indoor navigation technology ready to get directions indoors with GPS and iBeacon technology. Wi-Fi, the most popular wireless connectivity technology, is the preferred choice for indoor navigation systems with its ease of use.

IoT - AI - Blockchain
